Phase 4 Title Slide

Phase 4: Enhancements & Deployment (Deadline

– Week 9)

- Final refinement phase focusing on advanced

features, performance, and deployment.

Additional Features

- Add persistent login using localStorage or cookies.

- Introduce role-based access (e.g., admin vs. user).

- Improve navigation with route transitions or animations.

- Integrate error boundaries and loading indicators for

  smoother UX.

UI/UX Improvements

- Refine component styling for consistency and readability.
- Enhance responsiveness for mobile and tablet screens.
- Simplify layout and improve accessibility (color contrast, keyboard navigation).
- Add polished visuals like icons, hover effects, and transitions.

API Enhancements

- Connect frontend with backend APIs for real authentication.
- Use RESTful endpoints for login, logout, and data retrieval.
- Implement secure token management (JWT).
- Add proper error handling and status codes for reliability.

Performance & Security Checks

- Optimize rendering using React memoization and lazy loading.

- Minify assets and reduce bundle size.

- Check for XSS and CSRF vulnerabilities.

- Use HTTPS and environment variables for secure API keys.

Testing of Enhancements

- Re-test all new features after integration.

- Conduct regression testing to ensure no previous functionality breaks.

- Validate performance under different devices and network conditions.

- Review UI/UX feedback and make final adjustments.

Deployment (Netlify, Vercel, or Cloud Platform)

- Build and deploy production-ready React app.

- Host on Netlify or Vercel for automatic CI/CD.

- Configure environment variables for API endpoints.

- Share live link for testing and feedback before final sign-off.
